

Primex Sync™ Synchronized Clock Systems

The Primex Sync timekeeping solution provides synchronized clocks for hospitals, schools, businesses, warehouses, transit centers, and other facilities to help everybody and everything stay on time.

Primex Sync makes it easy for architects, engineers, and building planners to choose the correct in-facility technology by providing:

- Ready-to-use specification documents for each of the four Primex timekeeping technologies
- Accessible specification documents listed in MasterSpec®
- A plethora of Analog and Digital Clock options that will fit any customer's or facility's needs
- Free building and campus design evaluations from in-house Primex experts

The Primex Sync platform offers four different time synchronization technologies to support a wide range of applications and installations:

Primex Sync Radio

A patented, high-penetration 72 MHz frequency talks to devices throughout a building or campus with the option to leverage GPS- or NTP-acquired time.

Primex Sync Wi-Fi

Accessing an existing IT network via Wi-Fi quickly synchronizes clocks to the exact second and allows for clock placement flexibility and simple facilitywide expandability.

Primex Sync Bluetooth®

Clocks form a Bluetooth® Low Energy mesh network to transmit status and receive NTP time and other updates from the cloud-based OneVue® Software.

Primex Sync PoE Network

Clocks connect to a facility's network via Ethernet to obtain time from an NTP server and transmit data to and download settings from the OneVue Software platform.

Unrivaled Signal Strength

Signals from a Primex Sync Transmitter easily pass through common building materials used in commercial construction.

Customization

Custom dials are available for Analog Clocks to prominently display organization logos.

Automatic Time Changes

Primex Sync clocks automatically resynchronize after daylight saving time shifts and power outages.

Power Options

Synchronized clocks can be powered by batteries, AC power, or through an Ethernet (PoE Network) connection.

Interfacing with Other Systems

Primex Sync clocks integrate with a variety of leading public address and life safety systems.

Peace of Mind

Primex Sync Transmitters and Clocks come with a 5-year standard warranty.
